

ANNUAL REPORT

CTC Source Protection Region

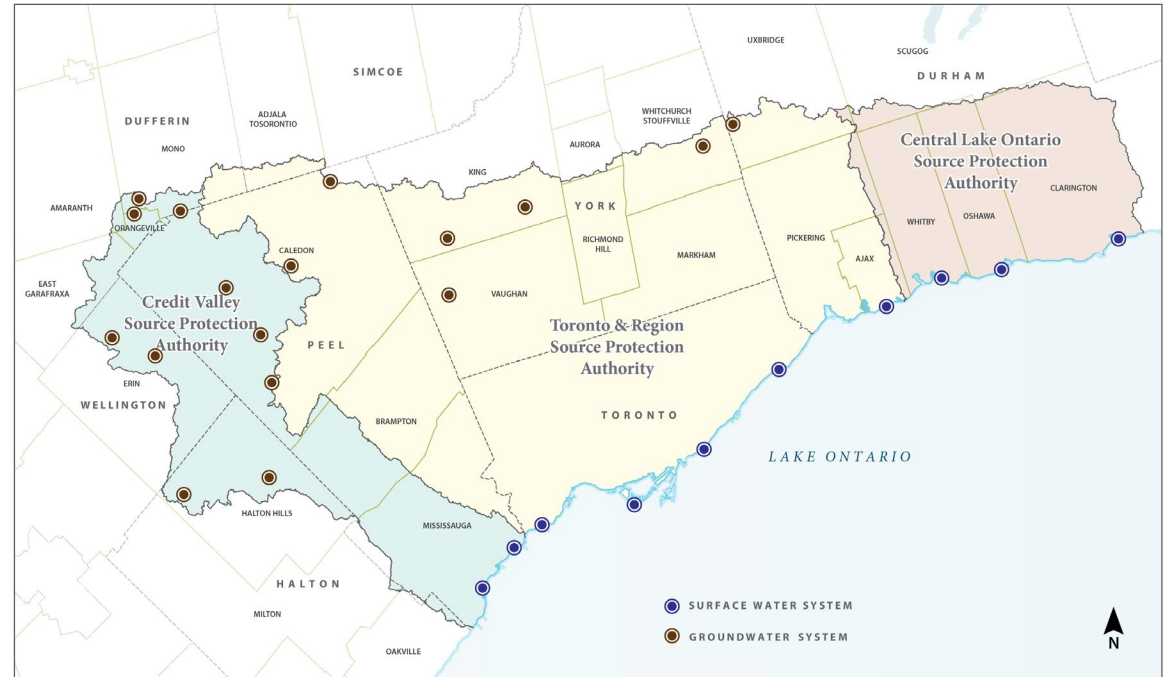

2017

CTC SOURCE PROTECTION REGION

The *Clean Water Act, 2006* established Source Protection Areas and Regions across Ontario, largely based on the watershed boundaries of Ontario's conservation authorities. The CTC Source Protection Region encompasses three such Areas: Credit Valley, Toronto and Region, and Central Lake Ontario.

There are nineteen Source Protection Committees which were created to undertake a technical assessment of sources of drinking water servicing municipal drinking water systems. These committees were also tasked with developing a Source Protection Plan with requirements of municipalities, conservation authorities, the Province, and other stakeholder to protect these systems.

The CTC Source Protection Region spans more than 10,000 square kilometers and includes 33 municipalities. The most densely populated region in Canada, it supports a wide variety of sometimes conflicting water needs: from drinking water supply and recreation to industrial and agricultural uses.

Map of Municipal Drinking Water Systems in CTC SPR

PROGRAM ASSESSMENT

Progress in the CTC Source Protection Region

Provincially, progress on implementing source protection plans is ranked through three categories.

PROGRESSING WELL (ON TARGET)

Most of the source protection plan policies have been implemented and/or are progressing according to the timelines in the source protection plan.

SATISFACTORY

Some of the source protection plan policies have been implemented and/or are progressing according to the timelines in the source protection plan.

LIMITED PROGRESS MADE

A few source protection plan policies have been implemented and/or are progressing in according to the timelines in the source protection plan.

In 2017, the CTC Source Protection Plan was:

PROGRESSING WELL (ON TARGET)

MUNICIPAL INDICATORS

Since the CTC Source Protection Plan became effective two years ago, Risk Management Officials (RMOs) have accomplished measured steps towards reducing significant drinking water threats. Threats are characterized through risk assessments that determine whether they pose a low, moderate, or significant risk. Significant drinking water threats have a high hazard level, and are located in areas that are near drinking water sources, or are in an area that is vulnerable to impacts.

RMOs verify where threats exist, work with land and business owners to change practices or materials to remove threats, or where this is impossible, develop risk management plans. Risk management plans must be established within five years from the date the CTC Source Protection Plan took effect.

Screening Section 59 Notices

Under the *Clean Water Act, 2006* Section 59 governs development applications that are required to follow the policies in the Source Protection Plan. RMOs review applications to make sure that the land use will not threaten drinking water sources.

Septic System Inspections

The Ontario Building Code's Mandatory Septic System Inspection Program gives public officials the responsibility for ensuring septic systems are inspected every five years. These inspections ensure that septic systems are properly maintained and reduce the potential for threats to public health. In the CTC Source Protection Region, septic systems were required to be inspected by January 2017.

Inspections

Risk Management Officials and Inspectors may enter property if they believe an activity, identified in the Source Protection Plan, that has the potential to threaten sources of drinking water, is taking place. Inspections are also scheduled to verify whether there are drinking water threats actually present and to ensure the actions outlined in Risk Management Plans are being implemented. Most municipalities in the CTC Source Protection Region had completed threat verification inspections prior to 2017.

PRESCRIBED INSTRUMENTS

EXAMPLES OF PRESCRIBED INSTRUMENTS

Ontario Water Resources Act

- Permit to Take Water

Environmental Protection Act

- Environmental Compliance Approvals

Aggregate Resources Act

- Application for Licenses

Prescribed instruments are created under Ontario legislation and include permits, licenses, approvals, authorizations, and directions or orders. Many threats to drinking water identified under the *Clean Water Act, 2006* are already regulated through provincial instruments. Instruments are specific to the activity being carried out and include requirements designed to protect the environment and human health. The CTC Source Protection Plan has a number of policies that direct the Province to manage a particular activity using a prescribed instrument. In some cases, existing instruments for activities that pose a significant threat to drinking water may need to be amended to ensure they conform with source protection plan policies. Policies in the CTC Source Protection Plan require prescribed instruments to be reviewed, and if necessary, amended, within three years of the plan having been made effective (i.e. by December 2018).

Drinking water threat counts that are included in this report for each municipality include those threats addressed using prescribed instruments. Provincial ministries have developed processes to ensure that all applications once received are screened appropriately for source protection considerations.

2016 and 2017 Progress on Prescribed Instruments under the *Clean Water Act, 2006* in the CTC Source Protection Region

	PIs Subject to CTC Source Water Policies	PIs with Completed Review	PIs Amended or Replaced
MOECC – Fuel Handling and Storage	17	6	0
MOECC – Permit to Take Water	6	1	1
MOECC – Wastewater, Sewage Works	108	29	0
MOECC – Landfilling and Storage	9	4	0
OMAFRA – Nutrient Management Strategies	1	1	0

LAKE ONTARIO

Peel – Toronto – Durham

PROGRESSING WELL (ON TARGET)

Event-based modeling was used as a tool to identify activities that could be significant threats to municipal drinking water systems on Lake Ontario. A number of scenarios based on past events were developed to understand to what extent existing activities, such as spills from bulk petroleum storage facilities, wastewater treatment plants, nuclear generating stations, or pipelines transporting petroleum products containing benzene could impact municipal intakes on Lake Ontario. Ongoing work is taking place to develop and further improve existing practices to ensure that intakes are protected from activities taking place on lands adjacent to Lake Ontario.

The Ministry of the Environment and Climate Change is working in partnership with the municipalities of Peel, Toronto, and Durham to collaboratively undertake actions to support the implementation of policies in the CTC Source Protection Plan specific to protecting Lake Ontario as a source of drinking water. The group focuses on improving technical knowledge and enhancing communications in the event of a spill, which could impact drinking water systems on Lake Ontario within the CTC Source Protection Region.

IMPLEMENTATION STATUS

MUNICIPAL POLICIES

PROVINCIAL POLICIES

SOURCE PROTECTION in the CTC Source Protection Region

2000

Walkerton well *E. coli* contamination

2006 **Clean Water Act**

- Promote watershed-based, science-based, multi-stakeholder approach to protecting sources of drinking water
- Watershed characterization work completed to understand local conditions

2007

Source Protection Committees created

2002

Safe Drinking Water Act

2010

Public consultation for the three Assessment Reports

2008

Public consultation for Terms of Reference

2015

Release of CTC Source Protection Plan – policies to manage drinking water threats

2013-2014

Public consultation on water budget studies

2012

- Approval of Assessment Reports – provides scientific foundation for Source Protection Plan
- Water budget studies – understanding systems with water quantity stress

2009

- Approved Terms of Reference
- Technical studies to define vulnerable areas, and identify water quality and quantity issues

2017

- Education and Outreach, and Incentive policies are developed and implemented
- First round of septic inspections complete

2018

- Prescribed Instruments are reviewed and amended as necessary
- Amend Source Protection Plan through section 34 to improve implementation challenges
- CTC Source Protection Region submits workplan for next phase of source protection planning

2020

Risk Management Plans are established for all threats that require a plan

**SOURCE WATER PROTECTION IS
EVERYONE'S RESPONSIBILITY.**
